

Claude Code — Get Started

Install once, in about 20 minutes. No coding or Docker knowledge required.

VISUAL GUIDE
REV. AUG 2026 · V1.3.1

BEFORE YOU START

Request your **UVA Amazon Bedrock credentials** from Batten IT now — you'll need them at Step 3, and usage is billed to the University, not to you.

1 Install Docker Desktop

Download from docker.com/products/docker-desktop — pick Apple chip / Intel / Windows. Accept the defaults; on Windows allow **WSL 2** and restart if asked.

Open Docker Desktop and wait for “*Docker Desktop is running*” (whale icon) before Step 2.

2 Run one command

MACOS — TERMINAL APP

```
curl -fsSL https://raw.githubusercontent.com/wmo4buva/cc-install/main/scripts/installers/install.sh -o install.sh && bash install.sh
```

WINDOWS — POWERSHELL ONLY

```
irm https://raw.githubusercontent.com/wmo4buva/cc-install/main/scripts/installers/install.ps1 | iex
```

Takes 10–15 min. Scrolling text is normal; wait for the green **Installation Complete!**

3 New terminal, then sign in

Close the old window first — the shortcuts only appear in a fresh one. Then type `ccauth` and choose option **3 — Amazon Bedrock** (the UVA option, billed to the University). Enter the Access Key ID and Secret Access Key from Batten IT — **nothing appears as you type or paste; that's normal**. Press Enter to accept region `us-east-1`, then press Enter **twice more** to skip the optional session token and model ID.

“**command not found**”? You're still in the old terminal window. Sign-in is once only and survives updates.

4 Launch Claude Code

Type `ccdoker` for Claude Code in your terminal, or `ccvscode` for the browser-based editor at **localhost:8080**.

Your sign-in applies to both, so either one just works.

COMMANDS — WORK FROM ANYWHERE

<code>ccauth</code>	Set up or change how you sign in
<code>ccdoker</code>	Launch Claude Code in the terminal
<code>ccvscode</code>	Launch the browser editor (localhost:8080)
<code>ccstop</code>	Stop it when you're done for the day
<code>ccrestart</code>	Restart if something seems stuck
<code>ccdiagnose</code>	Check your install and get fixes
<code>ccbackup</code>	Back up your workspace
<code>ccupdate</code>	Update everything (10–15 min, keeps your files)
<code>cclogs</code>	Show technical logs for troubleshooting

IN THE BROWSER EDITOR

There is **no Claude Code button**. Choose **Terminal** → **New Terminal**, type `claude`, press Enter. Same sign-in as the terminal.

IF SOMETHING GOES WRONG

Always run `ccdiagnose` first. It checks Docker, ports, disk space and your sign-in, then tells you the fix.

“Docker daemon is not running”

Open Docker Desktop, wait until it says running.

Install command doesn't work on Windows

Use PowerShell, not Command Prompt.

Browser editor won't open

Wait ~10s, then visit localhost:8080 manually.

“Port 8080 already allocated”

Run `ccdiagnose`, or contact Batten IT.

Keeps asking you to sign in

Run `ccdiagnose`, then `ccauth`.

USING IT DAY TO DAY

Just talk to it

Type what you want in plain English — “*summarize the CSV in my workspace*” or “*draft a Python script to rename these files*.” Claude Code reads, writes and edits files for you.

Skills are pre-installed

Type `/skills` inside Claude Code to see the skill packs already included, and `/help` for commands.

Update safely

Back up first, then update: `ccbackup` → `ccupdate`. Your workspace and sign-in are untouched.

Your files & your own projects: everything lives in `cc-install/workspace/` — a normal folder you can open, drag files into, and back up. To work on a project you already have, **drag its folder into workspace/** — it appears instantly, no restart. In the browser editor use **File** → **Open Folder** → `/home/claudeuser/workspace/your-folder`. Shortcuts and aliases pointing outside `workspace/` will not work — copy the real folder in.
